### **Mahadhan Amruta 0:52:34 (Mono Potassium Phosphate (MKP))**

i) What nutrients does it contain?

- P & K

ii) What is it & how does it help in crop nutrition?

- Rich in water soluble phosphorus and potash.
- Suitable for pre-bloom as well as post-bloom applications.
- Popularly used for proper ripening and attractive colour formation of rind in fruits like pomegranate.
- Improves luster, uniform colour and taste

iii) How does it benefit farmers?

- Farmers get higher yields and better quality produce and as a result higher returns from their farming
- Since K is supplied in the form of Sulphate of Potash, farmers can use this grade safely in chlorine-sensitive crops also.

iv) What are the crops in which farmers could use it?

- For Fertigation: Grapes, Pomegranate, Banana, Cotton, Tomato, Onion, Sugarcane, Ginger, Turmeric, Watermelon, Floriculture, Protected Cultivation
- For Foliar application: All crops
