Mahadhan Amruta Calcium Nitrate (CN) N 15.5% and CA 18.8%

i) What nutrients does it contain?

- N & Ca

ii) What is it & how does it help in crop nutrition?

- Unique source of water soluble calcium.
- Acts as a carrier of Nitrate Nitrogen within the plant.
- Reduces the calcium deficiency of the plant and helps the crops grow and vigour.
- Makes the plant healthy and sturdy by increasing tolerance to pests and diseases.
- Helps in neutralizing toxic chemicals within the plant.
- Improves pH of soil and increases availability of trace elements.
- Increases fruit setting.
- Improves rind quality of the fruit
- Increases crop quality and yield.
- Increases shelf life of the produce.
- Reduces blossom end rot in tomato and leaf spot in potato.

iii) How does it benefit farmers?

- Farmers get higher yields and better quality produce and as a result higher returns from their farming
- Suitable for both foliar applications and fertigation through drip irrigation

iv) What are the crops in which farmers could use it?

- For Fertigation: Grapes, Pomegranate, Banana, Cotton, Tomato, Onion, Sugarcane, Ginger, Turmeric, Watermelon, Floriculture, Protected Cultivation
- For Foliar application: All crops
