Mahadhan Bensulf - S-90%

i) What nutrients does it contain?

- S

ii) What is it & how does it help in crop nutrition?

- Mahadhan Bensulf is a pastille form biodegradable Sulphur Fertilizer meant for soil application.
- Contains 90% elemental sulphur and 10% formulated swelling agent viz Bentonite clay. Through this, Sulphur can be easily and uniformly applied in the soil.

iii) How does it benefit farmers?

- Helps to increase chlorophyll in plant leaves resulting in high yield.
- Increases oil content in oilseeds.
- Increase pungency in onion and garlic.
- Increase sugar content and improves juice quality.
- Improves pH of soil. Increases availability of Phosphorus, Iron (Fe), Zinc (Zn) and Boron.
- Helps in improving the quality of produce and increasing the yield.
- Helps plants develop resistance to fungal diseases.
- Helps in reclamation of saline-alkaline and calcareous soils.
- Optimum disintegration: Provides Sulphate as per the crop requirement.
- Minimal leaching losses.
- Mixes uniformly with other fertilisers, hence it can be mixed with other fertilisers and applied to the crops.
- Gives no opportunity for any kind of adulteration.
- Easy to use and safe to handle.

iv) What are the crops in which farmers could use it?

- Cotton, Sugarcane, Soybean, Groundnut, Grapes, Banana, Pomegranate, Onion, Tomato and other vegetable.
